

Cosmic Nidhi - Bug Report & Issue Tracking

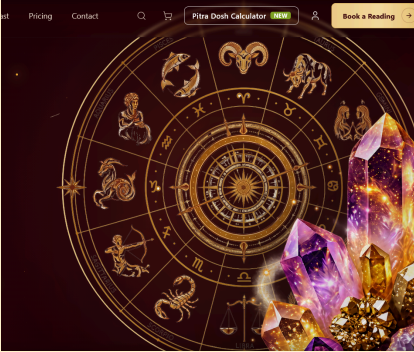

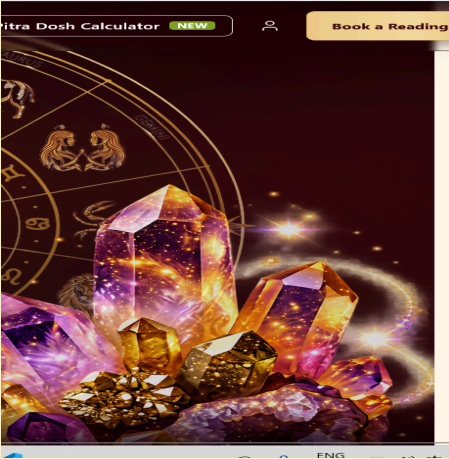

UI/UX Bugs, Functional Issues, and Feature Requests

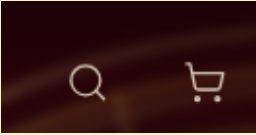

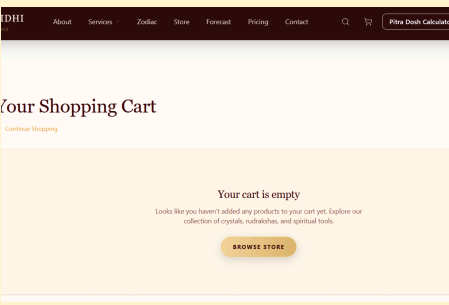

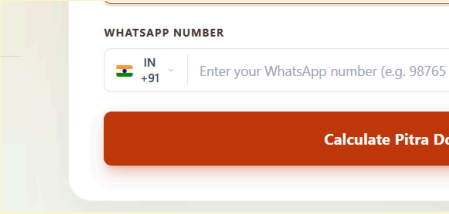

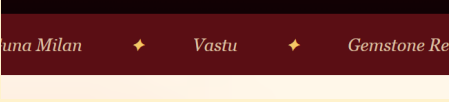

Note: (Need to be fixed Immediately This Request is non negotiable)

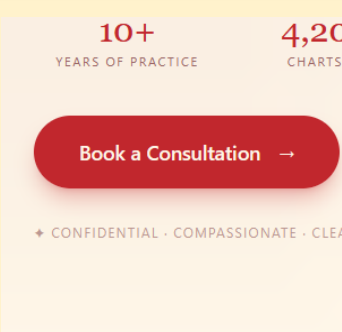

1. UX/UI : there are no **small transitions/ animations** which makes UX feeling premium (eg. Buttons are abruptly becoming bigger and smaller, Underlines becoming full and small very fast)
2. Mobile View : **Most IMP View. Major Traffic Will come from Mobile Users**

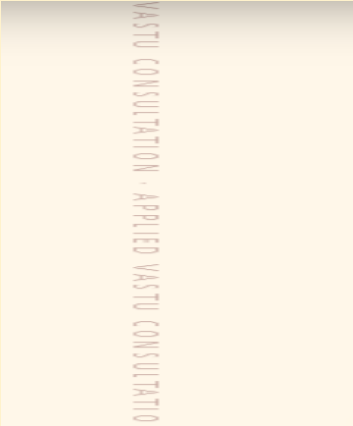

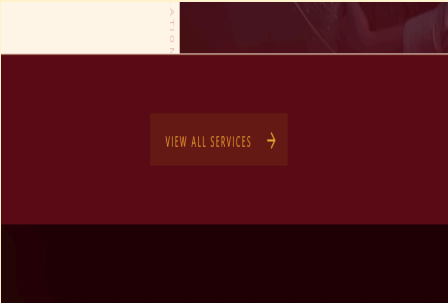

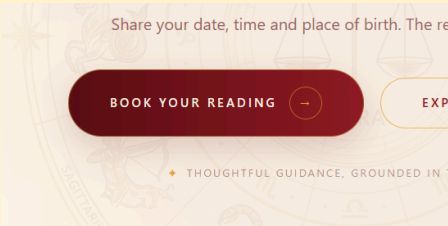

Bug #	Category	Issue Description	Screenshot / Evidence	Details / Impact
1	1. Critical & Major Issues	Landing page performance is very laggy, even on high-end laptops.	 A screenshot of a web browser's developer tools, specifically the Network tab. It shows a list of GET requests to various endpoints. The last request, to 'https://checkout-static-next.razorpay.com/build/undefined', has a status of 403 (Forbidden). The response headers show 'Status: 403 (M)', 'Version: HTTP/3', 'Transferred: 376 B (0 B size)', 'Referrer Policy: strict-origin-when-cross-origin', 'Request Priority: Highest', and 'DNS Resolution: System'. The response headers are listed as 376 B.	Sending API requests repeatedly, which might be causing page lag. Main issue is not fixing this API bug but make it feel smooth
2	1. Critical & Major Issues	Admin backend product creation is not working (creating a product does nothing).	 A screenshot of a web browser's developer tools, specifically the Network tab. It shows a failed request to 'products'. The response is a JSON object: {success: false, message: 'E11', success: false}. The message 'E11' likely refers to a duplicate key error in a database.	Admin product creation fails with a duplicate key error on SKU.
